# 1. INTRODUCTION

## 1.1 Project Overview

This system “Car Resale Value Prediction” aims to build a regression model to predict used cars' resale value based on multiple aspects, including vehicle mileage, year of manufacturing, fuel consumption, transmission, road tax, fuel type, and engine size. This model can benefit sellers, buyers, and car manufacturers in the used cars market. Upon completion, it can output a relatively accurate price prediction based on the information that user's input. Various regression methods, including linear regression, polynomial regression, support vector regression, decision tree regression, and random forest regression, were applied in the research to achieve the highest accuracy.

This system was implemented as a web application where the user enters the details of the car to get an estimation of the car's resale value.

## 1.2 Purpose

Car resale value prediction helps the user to predict the resale value of the car depending upon various features like kilometers driven, fuel type, etc. The purpose of this system is of commercial interest to sellers/financer to be able to predict the resale value of cars with better accuracy. The most essential elements for forecast are brand and model, period use of vehicle, mileage of vehicle, gear type and fuel type utilized in the vehicle just as fuel utilization per mile profoundly influences cost of a vehicle because of continuous changes in the cost of a fuel. In view of the differing highlights and factors, and furthermore with the assistance of master information the vehicle resale value forecast has been done precisely.

## 2. LITERATURE SURVEY

### 2.1 Existing problem

With difficult economic conditions, it is likely that sales of second-hand imported (reconditioned) cars and used cars will increase. In many developed countries, it is common to lease a car rather than buying it outright. After the lease period is over, the buyer has the possibility to buy the car at its residual value, i.e., its expected resale value. Thus, it is of commercial interest to sellers/financers to be able to predict the salvage value (residual value) of cars with accuracy.

### 2.2 References

Project Title	Author	Abstract
Price Prediction of Used Cars Using Machine Learning	Chuyang Jin	This work aims to build a model to predict used cars' reasonable prices based on multiple aspects. Various regression methods including linear regression, polynomial regression, support vector regression, decision tree regression, and random forest regression were applied in the work to obtain highest accuracy. Compared to previous research, the resulting model includes more aspects of used cars while also having a higher prediction accuracy.
Prediction of Prices for Used Car by using Regression Models (2018)	Nitis Monburinon, Prajak Chertchom, Thongchai Kaewkiriya, Suwat Rungpheung, Sabir Buya, Pitchayaki Boonpou.	In this work, a model to evaluate price based on big data analysis is proposed. It takes advantage of vehicle data and vehicle transaction data to analyze the price data for each type of vehicles. The work uses optimized Back Propagation neural network algorithm.
Car Price Prediction Using Machine Learning (2019)	Enis gegic, Becir Isakovic, Dino Keccand, Zerina Masetic, Jasmin Kevric.	In this work, several distinct attributes are analyzed for the reliable and accurate prediction. The work is to build a model to predict the resale price of cars in Bosnia and Herzegovina
Used Car price prediction (2021)	Praful Rane, Deep Pandya, Dhawal Kotak.	In this work, machine learning models that can accurately predict the price of a used car based on its features was built. They have implemented and evaluated various learning methods on dataset consisting of the sale prices of different models.
Prediction of Used Car Price Based on Supervised Learning Algorithm (2021)	Feng Wang, Xusong Zhang; Qiang Wang	In this work, Extra Trees Regressor, Random Forest Regressor was used. Finally, the algorithm was optimized by using the hyperparameter function. The results show that $R^2 = 0.9807$ obtained from extreme random numbers is the best performance. The algorithm was obtained and validated with new data to derive the final algorithm model.

### 2.3 Problem Statement Definition

It is easy for any company to price their new cars based on the manufacturing and marketing cost it involves. But when it comes to a used car it is quite difficult to define a price because it involves it is influenced by various parameters like car brand, manufactured year etc. The goal of our system is to predict the best price for a used car in the based on the previous data related to sold cars using machine learning.

These factors range from **year of purchase, make, model, kilometers driven and overall condition of the car.**

### 3. IDEATION & PROPOSED SOLUTION

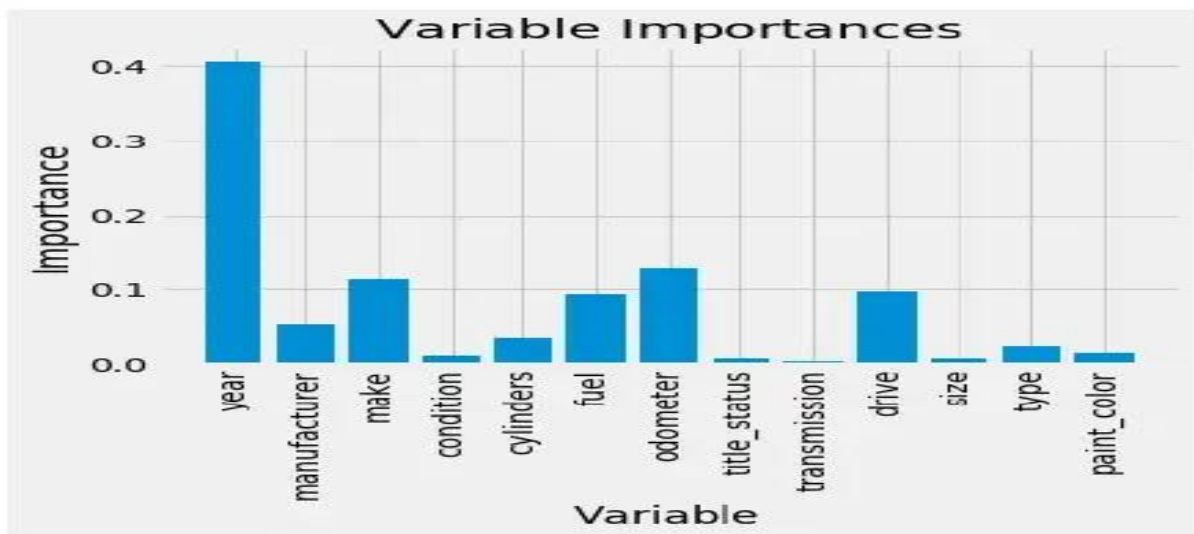

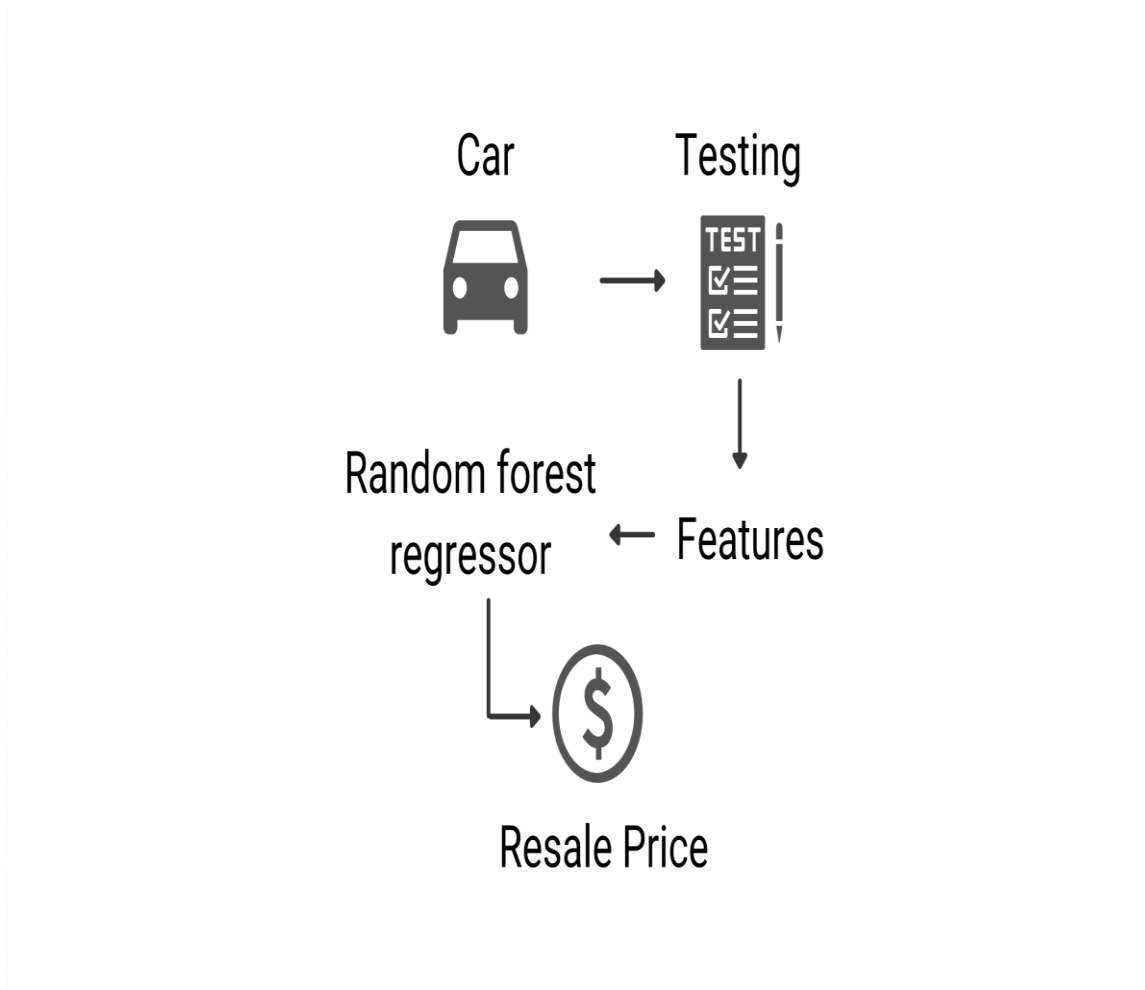

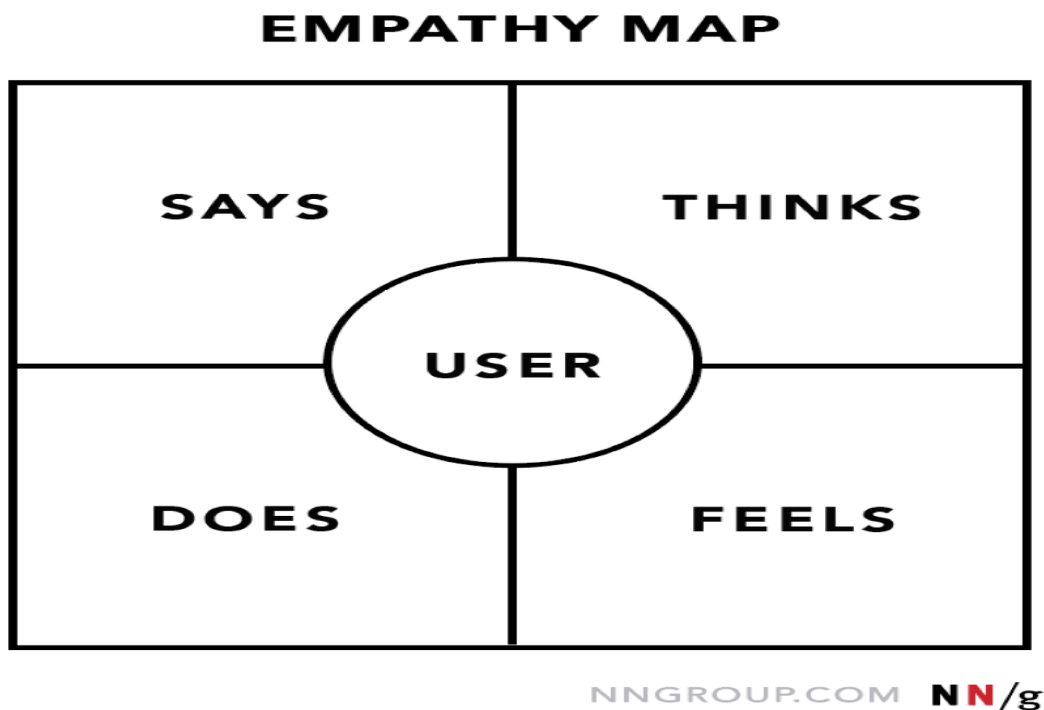

Figure 12: Bar plot of variable importance

## Empathy map Canvas

Car Resale Value Prediction Using Random Forest Regressor

Which algorithm is best for used car price prediction?

At the last stage, predictive models were applied to predict price of cars in an order: **random forest**, linear regression, ridge regression, lasso, KNN, XGBoost. By considering all four metrics from table 15, it can be concluded that random forest the best model for the prediction for used.

### **Used car sellers (dealers):**

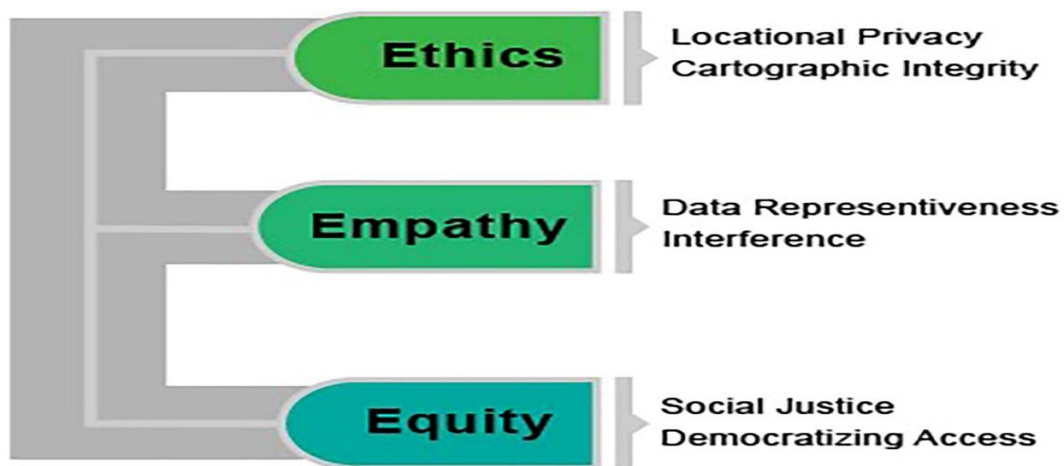

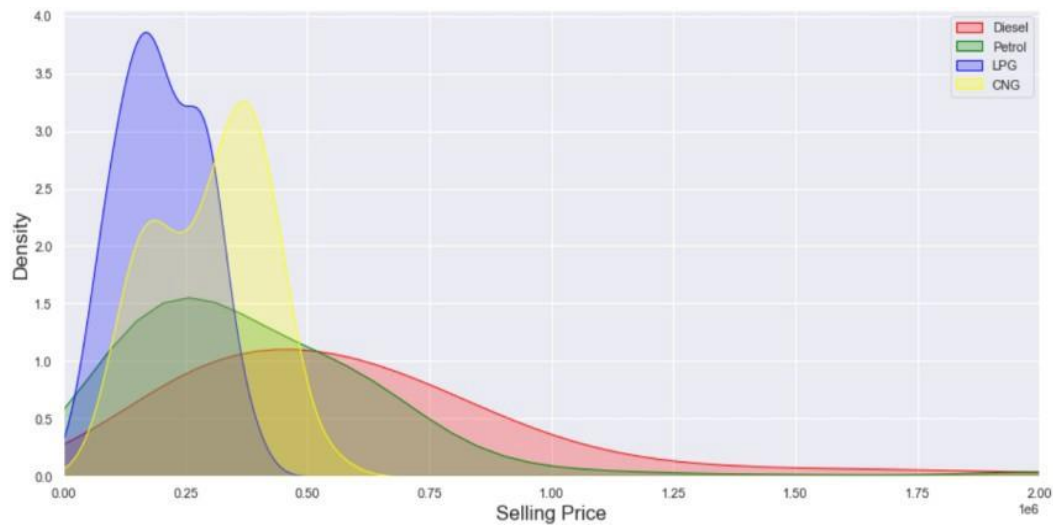

They are one of the biggest target group that can be interested in results of this study. If used car sellers better understand what makes a car desirable, what the important features are for a used car, then they may consider this knowledge and offer a better service.

## Online pricing services:

There are websites that offers an estimate value of a car. They may have a good prediction model. However, having a second model may help them to give a better prediction to their users. Therefore, the model developed in this study may help online web services that tells a used car's market value.

## Individuals:

There are lots of individuals who are interested in the used car market at some points in their life because they wanted to sell their car or buy a used car. In this process, it's a big corner to pay too much or sell less than it's market value.

## 3.1 Ideation & Brainstorming

### Step-1: Team Gathering, Collaboration and Select the Problem Statement

Template

## Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare  
 1 hour to collaborate  
 3-8 people recommended

[Share template feedback](#)

#### Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

#### Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

#### Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

#### Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#)

#### Define your problem statement

The problem statement is to consider the main factors which would affect the resale value of a vehicle and to build a regression model that would give the nearest resale value of the vehicle.

 5 minutes

Problem

How might we predict the resale value of a car?

#### Key rules of brainstorming

-  Stay in topic.
-  Encourage wild ideas.
-  Defer judgment.
-  Listen to others.
-  Go for volume.
-  If possible, be visual.

## IDEAS Listing & Brainstorm:

## **Grouping:**

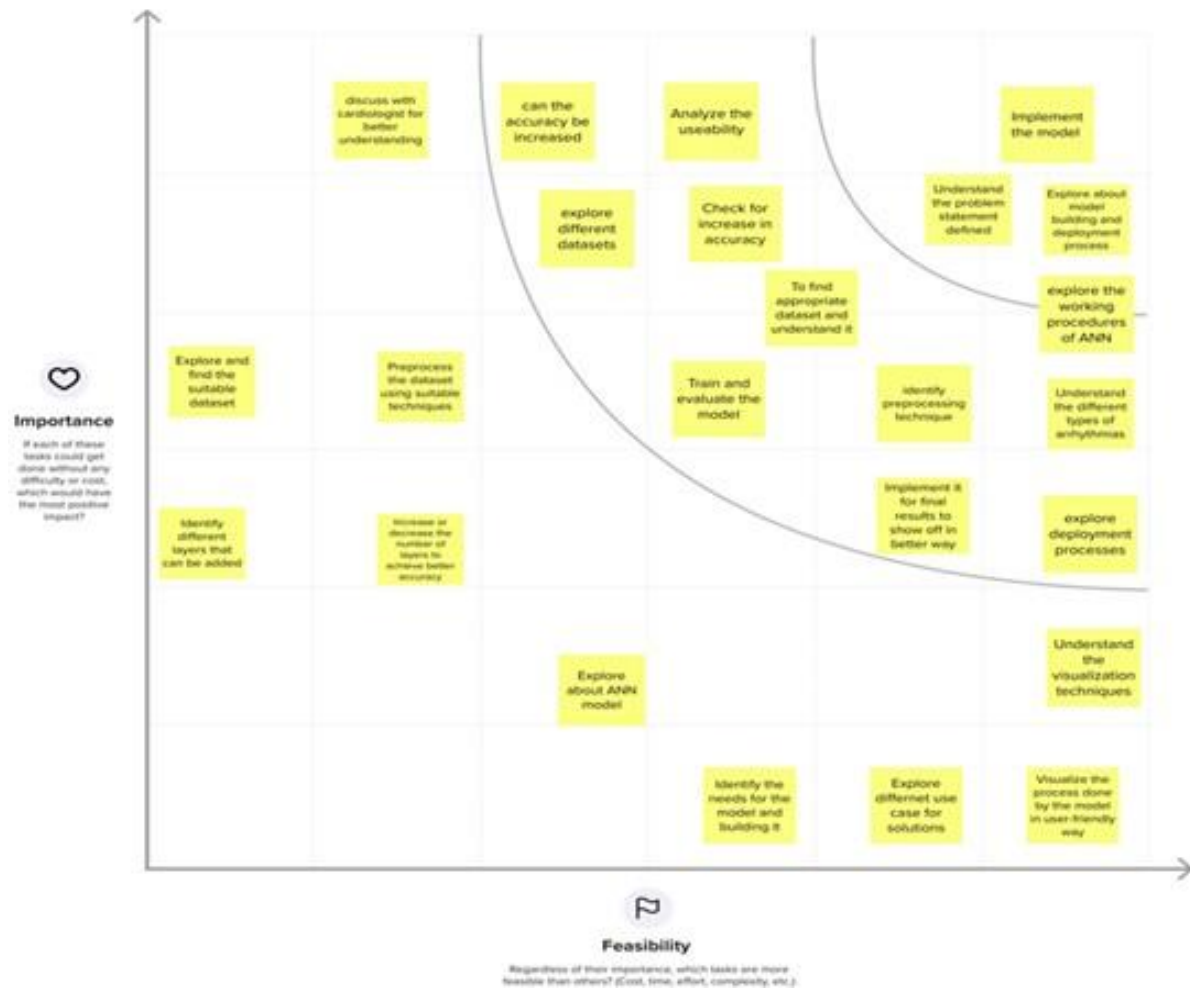

## Step-3: Idea Prioritization

4

### Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

⌚ 20 minutes

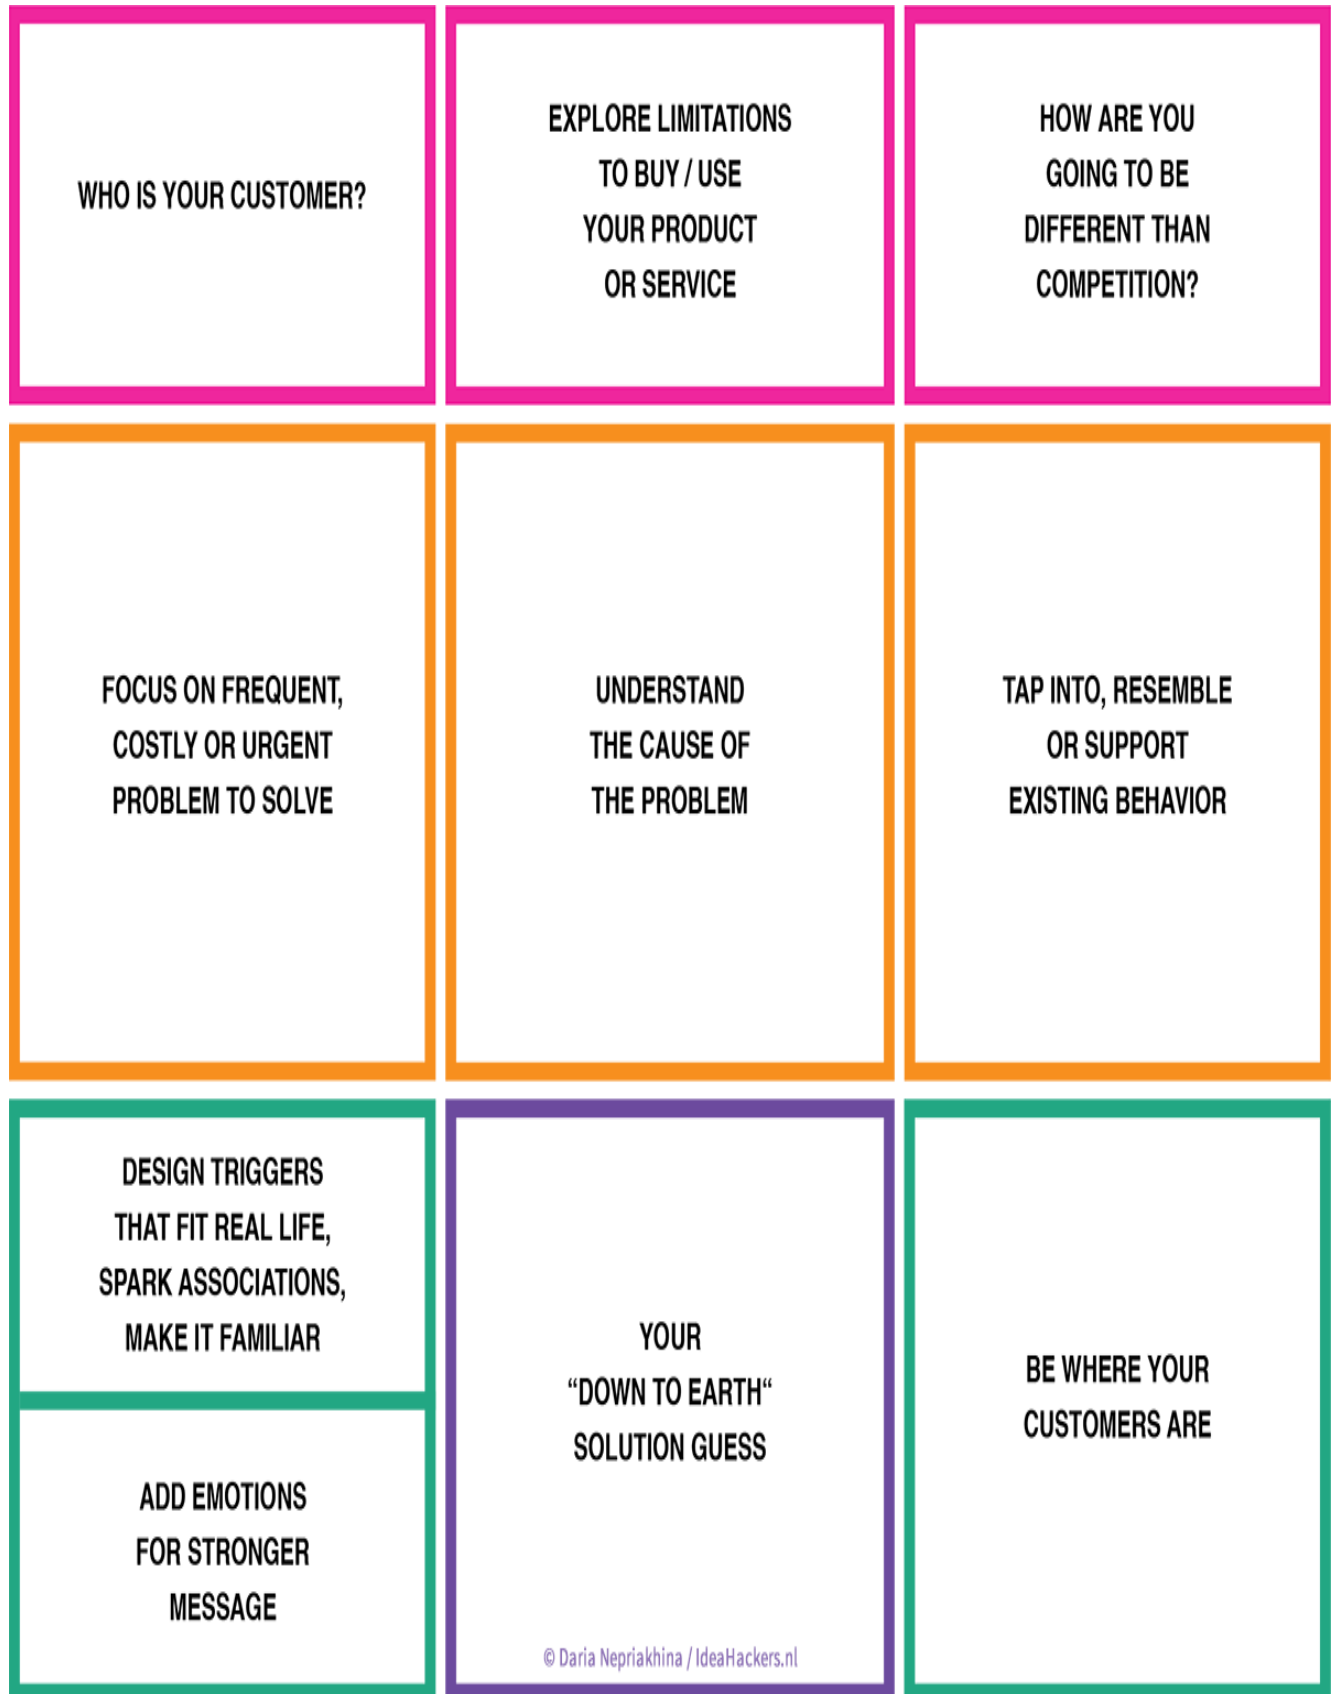

### 3.2 Proposed Solution

S. No:	Parameter	Description
1.	Problem Statement (Problem to be solved)	With difficult economic conditions, it is likely that sales of second-hand imported (reconditioned) cars and used cars will increase. In many developed countries, it is common to lease a car rather than buying it outright. After the lease period is over, the buyer has the possibility to buy the car at its residual value, i.e., its expected resale value. Thus, it is of commercial interest to sellers/financers to be able to predict the salvage value (residual value) of cars with accuracy.
2.	Idea / Solution description	In order to predict the resale value of the car, we proposed an intelligent, flexible, and effective system that is based on using regression algorithms. Considering the main factors which would affect the resale value of a vehicle a regression model is to be built that would give the nearest resale value of the vehicle. We will be using various regression algorithms and algorithm with the best accuracy will be taken as a solution, then it will be integrated to the web-based application where the user is notified with the status of his product.
3.	Novelty / Uniqueness	Car resale value price data frequently resides in several locations from various sources, such as industries or private persons, to various source systems. The organization as a whole contributes to the data. This data becomes accessible and usable when it is combined into a single, central system, such as an enterprise data warehouse (EDW).

4.	Social Impact / Customer Satisfaction	<p>1. Enhanced resale value accuracy</p> <p>2. Improved relationships with customers</p> <p>3. Leads to increased quality of products and it's related after sales service</p>
5.	Business Model (Revenue Model)	This business plan addresses all relevant concerns by presenting a comprehensive account of a month-by-month marketing strategy coupled with an extensive report on all aspects of the needs of a successful used car center.
6.	Scalability of the Solution	A variety of institutions must store, evaluate, and take action on the massive amounts of data being produced by the car resale industries as it expands quickly. India is a vast, culturally varied nation with a sizable population that is increasingly able to access centralized resale services.

### 3.3 Problem Solution fit

<p><b><u>1. Customer Segments</u></b></p> <p>+ Car mechanic</p> <p>+ Customer</p>	<p><b><u>1. Customer Limitation</u></b></p> <p>Proper information about the car is to be known by the customer to find the resale value.</p>	<p><b><u>5. Available Solution</u></b> To predict the resale value of the car, we use an intelligent, flexible, and effective system with web application.</p>
<p><b><u>1. Problems</u></b> Customer should know the details of their car in web application.</p>	<p><b><u>9. Problem root cause</u></b></p> <ul style="list-style-type: none"> <li>No Proper platform for car resale value prediction.</li> </ul>	<p><b><u>2. Behavior</u></b> Customers are supposed to enter the car details in the web application to find the resale price of the car.</p>

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Website
FR-2	User Confirmation	Confirmation via website
FR-3	Car Registration	Registering the car details
FR-4	Value Prediction	Predicting the car resale value

### 4.2 Non-Functional requirements

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Predicting the resale value
NFR-2	Security	Providing security to the website
NFR-3	Reliability	Providing high reliability by predicting values for different types of cars
NFR-4	Performance	Providing high performance by using some machine learning techniques
NFR-5	Availability	It is used for all types of cars
NFR-6	Scalability	Predicting values for different types of cars

## 5. PROJECT DESIGN

### 5.1 Data Flow Diagrams

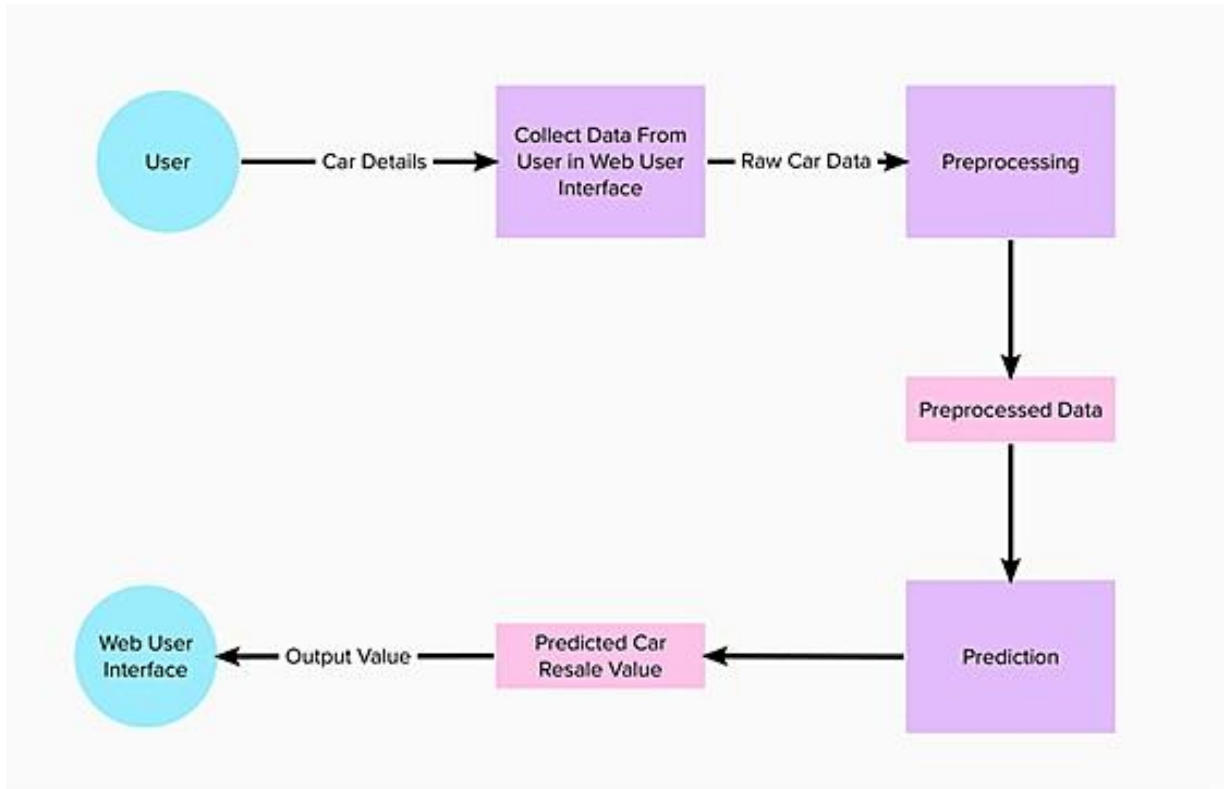

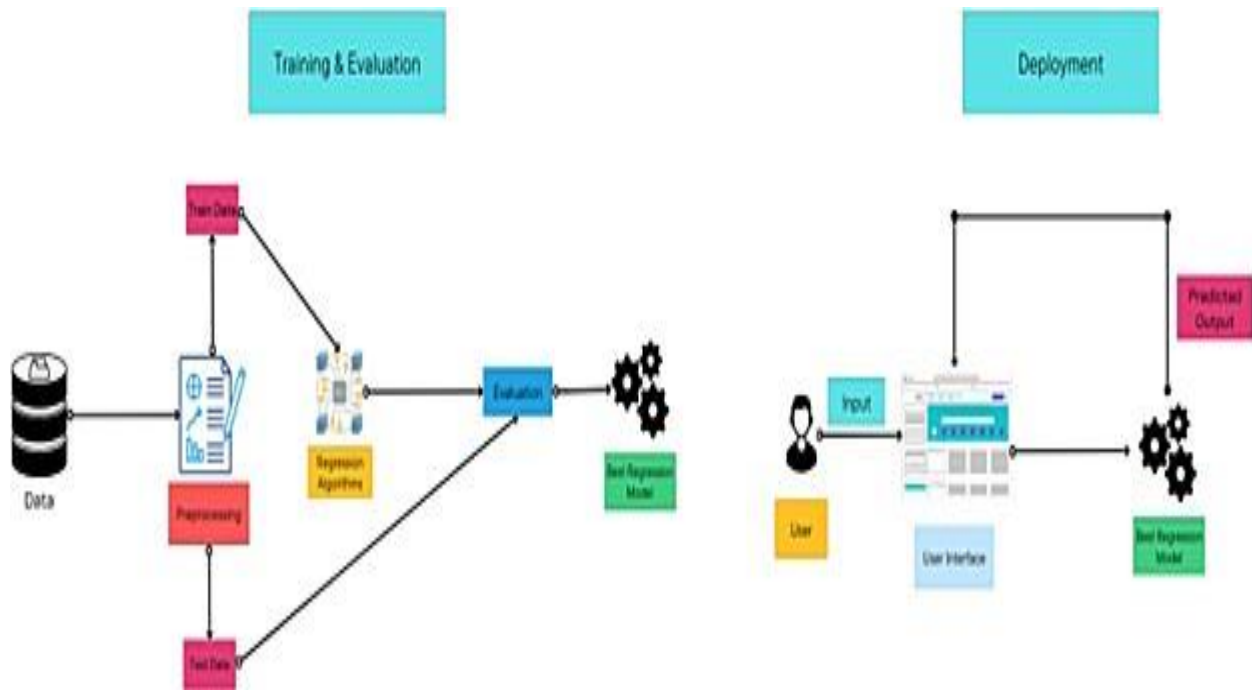

Table 6  
The effect of condition on price

Condition	Price					
	N	Mean	SD	SE	95% Conf.	Interval
excellent	153863	14492.84	10079.87	25.70	14442.47	14543.20
fair	21728	6448.94	6204.25	42.09	6366.44	6531.44
good	95136	10988.28	8818.59	28.59	10932.24	11044.32
like new	67102	22397.07	12569.97	48.53	22301.96	22492.18
new	3448	30019.38	14791.83	251.91	29525.57	30513.19
salvage	34055	10913.53	8114.61	43.97	10827.34	10999.71

## 5.2 Solution & Technical Architecture

## 5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer (Desktop user)	Home Page	USN-1	As a user, I can view the home page of the web application.	I can view the homepage	Low	Sprint-1
Customer (Desktop user)	Data Entry	USN-2	As a user, I can enter my car details in the application.	I can enter the car details	Medium	Sprint-2

Customer (Desktop user)	View car Resalevalue	USN-3	As a user, I can view theresale value of my car.	I can view mycar's resale value	Medium	Sprint-3
Customer (Desktop user)	Resale Value Prediction	USN-4	As a user, I expect the application to predict theresale value of my car.	I expect the application to predict my car resale price	High	Sprint-4

## 6. PROJECT PLANNING & SCHEDULING

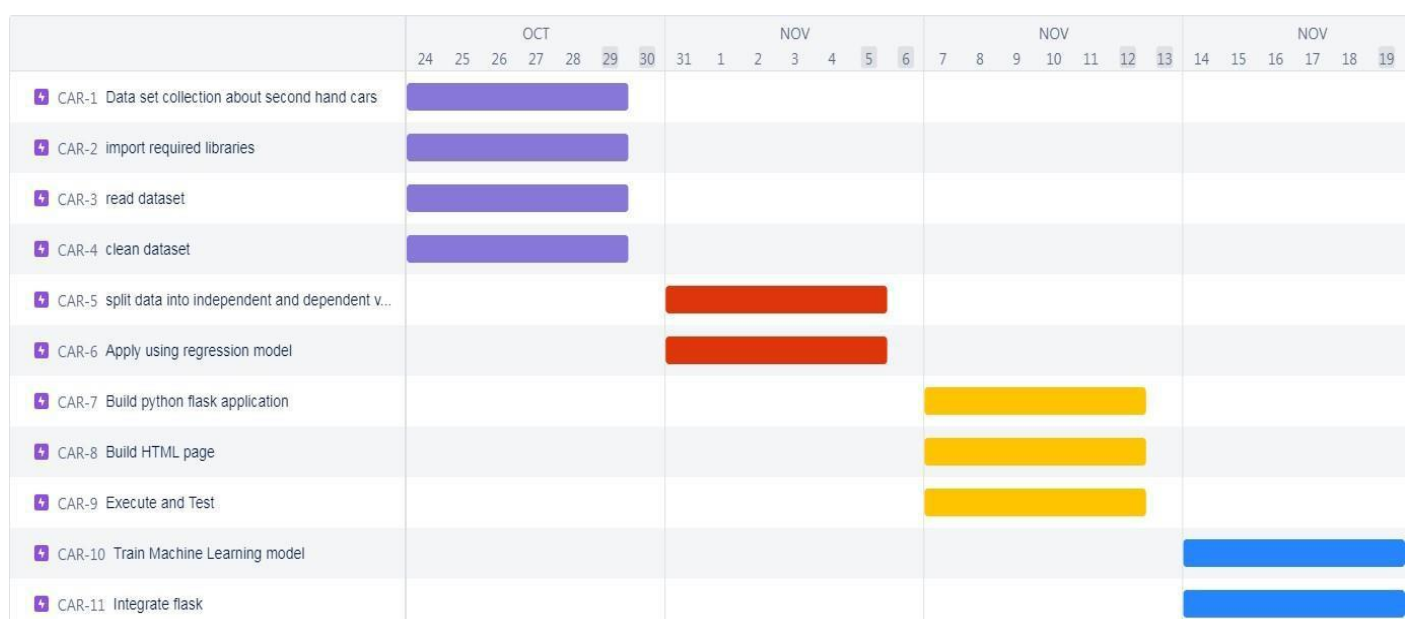

### 6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Pre-process data	USN-1	Collect Dataset	1	Low	Jayaram
Sprint-1		USN-2	Import required libraries	1	Low	Jayaram
Sprint-1		USN-3	Read and clean data sets	2	Low	Jayaram & Rahul
Sprint-2	Model building	USN-1	Split data into independent and dependent variables	3	Medium	Anandhakrishnan
Sprint-2		USN-2	Apply using regression model	3	Medium	Anandhakrishnan ,Nalan & Jayaram,
Sprint-3	Application building	USN-1	Build python flask application and HTML page	5	High	Anandhakrishnan
Sprint-3		USN-2	Execute and test	5	High	Anandhakrishnan
Sprint-4	Training the model	USN-1	Train machine learning model	5	High	Nalan
Sprint-4		USN-2	Integrate flask	5	High	Nalan

## 6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

## 6.3 Reports from JIRA

## 7. CODING AND SOLUTIONING

### 7.1 Feature-1

#### 7.1.1 Home Page

Displays the home page of the application.

Code:

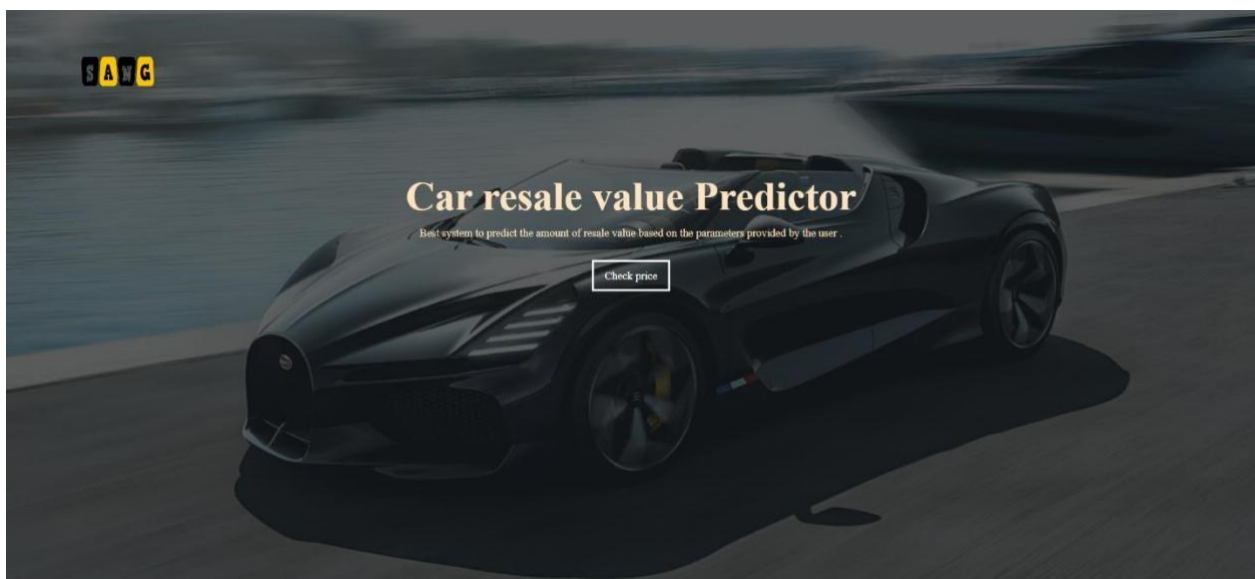

```
1) car.html <!DOCTYPE html> <html lang="en" dir="ltr">
<head>
<meta charset="utf-8">
<title>Car Resale Value Predicting Application</title>

Flask Application	10	0	0	10
Train Model on IBM	3	0	0	3
Final Report Output	4	0	0	4

## 9. RESULTS

### 9.1 Performance Metrics

#### 1. Metrics:

**Regression Model:** LGBM Regressor

MAE: 1327.55

MSE: 9492244.28

RMSE: 3080.95

RMSLE: 8.03

R2 Score: 0.8668

Adjusted R2 Score: 0.8668

#### Screenshot:

```
model = LGBMRegressor(boosting_type="gbdt", learning_rate=0.07, metric="rmse", n_estimators=300, objective="root_mean_squared_error", random_state=42, reg_sqrt=True)
model.fit(X_train, Y_train)

Y_pred = model.predict(X_test)

find_scores(Y_test, Y_pred, X_train)

/opt/conda/envs/Python-3.9/lib/python3.9/site-packages/sklearn/utils/validation.py:993: DataConversionWarning: A column-vector y was passed when a 1d array was expected;
the shape of y to (n_samples, ), for example using ravel().
  y = column_or_1d(y, warn=True)

{'mae': 1327.549477341283,
 'mse': 9492244.283543464,

 'adj_r2_score': 0.8668269262555739}
```

## 2. Tune the Model:

### Hyper parameter Tuning:

1. Learning Rate: [0.01, 0.03, 0.05, 0.07]
2. Boosting Type: ['gbdt','dart','goss','rf']
3. Number of Estimators: [100,200,300]
4. Validation Method: Grid Search Cross Validation
5. Best Parameters:  
Learning Rate – 0.07  
Boosting Type – 'gbdt'  
Number of Estimators – 300

Screenshot:

```
lgbm_configs = {  
    "name": 'LGBMRegressor',  
    "method": "grid",  
    "metric": {  
        "name": "adj_r2",  
        "goal": "maximize"  
    },  
    "parameters": {  
        "learning_rate": {

            "values": [100, 200, 300]  
        },  
        "random_state": {  
            "values": [42]  
        }  
    }  
}
```

### 3. Wandb sweep:

## **10. ADVANTAGES & DISADVANTAGES**

### **Advantages:**

- Application is easy to use
- User Friendly
- No Cost
- No need to commission any agent to get car resale value estimate

### **Disadvantages:**

- User needs to fill every asked detail of the car
- Doesn't work for cars from different distributions
- Not always accurate

## **11. CONCLUSION**

The increased prices of new cars and the financial incapability of the customers to buy them, used Car sales are on a global increase. Therefore, there is an urgent need for a Car Resale Value Prediction system which effectively determines the worthiness of the car in terms of cost. The proposed system is a web application that will help users to determine the accurate price of used cars.

## **12. FUTURE SCOPE**

In future, large historical data of car price can be used to train the model, and which can help improve the estimation of the machine learning model. Moreover, we can build an application for mobile phone platforms like android, iOS for interacting with users. For better performance, we plan to judiciously design deep learning neural networks.
